freedom libraries the untold story of libraries for african americans in the south as the civil rights movement exploded across the united states the media of the time was able to show the rest of the world images of horrific racial violence and while some of the bravest people of the 20th century risked their lives for the right to simply order a cheeseburger ride a bus or use a clean water fountain there was another virtually unheard of struggle this one for the right to read although illegal racial segregation was strictly enforced in a number of american states and public libraries were not immune numerous libraries were desegregated on paper only there would be no cards given to african americans no books for them read and no furniture for them to use it was these exact conditions that helped create freedom libraries over eighty of these parallel libraries appeared in the deep south staffed by civil rights voter registration workers while the grassroots nature of the libraries meant they varied in size and quality all of them created the first encounter many african americans had with a library terror bombings and eventually murder would be visited on the freedom libraries with people giving up their lives so others could read a library book this book delves into how these libraries were the heart of the civil rights movement and the remarkable courage of the people who used them they would forever change libraries and librarianship even as they helped the greater movement change the society these libraries belonged to photographs of the libraries bring this little known part of american history to life

Mastering AppLocker Audit Mode: A Comprehensive Guide

AppLocker, a powerful application control feature within Windows, offers robust security by restricting which applications users can run. Before implementing enforced rules that can impact user productivity, utilizing AppLocker's audit mode is crucial. This mode allows you to test your rules without immediate impact, identifying potential issues and refining your policy before deployment. This article explores the significance of AppLocker audit mode, addressing common challenges and offering practical solutions for a smoother, more effective implementation.

Understanding AppLocker Audit Mode

AppLocker audit mode operates by logging attempted application executions without blocking them. This logging provides invaluable insights into application usage patterns within your organization. Administrators can analyze these logs to identify applications that should be allowed, denied, or require further investigation. The information gathered allows for the creation of a precise and effective AppLocker policy, minimizing disruption and maximizing security. Essentially, it's a "dry run" before enforcing restrictive rules.

Setting Up AppLocker Audit Mode: A Step-by-Step Guide

1. Open the Local Security Policy: Navigate to `secpol.msc` to open the Local Security Policy console. This can be done through the Run dialog (Win + R) or by searching for it in the Start menu.
2. Navigate to AppLocker: Expand "Application Control Policies" and select "AppLocker."
3. Create a New Rule (Optional but Recommended): While not strictly necessary for audit mode, creating a new rule for testing provides a focused approach. Right-click on a rule type (Executable rules, DLL rules, Script rules, Windows Installer rules, Package rules, based on your needs) and select "Create New Rule."
4. Configure the Rule in Audit Mode: In the rule wizard, define your criteria (e.g., publisher, path, file hash). Crucially, ensure that the "Enforcement" setting is set to "Audit only." This is the key to enabling audit mode. Complete the wizard and name your rule descriptively.
5. Monitoring the Logs: After creating and enabling your rule(s), application attempts that match the criteria will be logged. These logs can be found using the Event Viewer (`eventvwr.msc`). Navigate to `Windows Logs` -> `Application`. Filter the logs by Event ID 8000 (for successful application launches) and 8001 (for denied application launches).

Analyzing AppLocker Audit Logs: Key Considerations

The AppLocker audit logs provide detailed information, including:

- Application Path: The full path of the executable or script.
- Publisher: The certificate information of the application's publisher.
- User: The user who attempted to run the application.
- Outcome: Whether the application launch was allowed (audit only, in this case) or would have been denied (if enforcement was enabled).
- Timestamp: The date and time of the attempted execution.

Analyzing these logs requires careful consideration. Focus on understanding the frequency of applications being logged, identifying unexpected applications, and categorizing applications for future policy development. Consider using tools like PowerShell to automate log analysis and generate reports.

Troubleshooting Common AppLocker Audit Mode Challenges

No Logs Appear: Ensure that the AppLocker service is running. Check the Event Viewer for any errors related to AppLocker. Verify that your rules are correctly configured and that the "Audit only" setting is enabled. **Overwhelming Log Volume:** Start with a focused audit, targeting specific user groups or applications. Refine your rules incrementally to reduce the volume of logs. **Difficulty Interpreting Logs:** Use the Event Viewer's filtering capabilities to isolate specific applications or users. Consider using a dedicated log analysis tool for better visualization and reporting. **Conflicts with Other Security Software:** AppLocker might interact with other security solutions. Temporarily disable conflicting software to isolate potential issues. **Unexpected Application Denials (Even in Audit Mode):** This is unlikely in pure audit mode but might occur if other security mechanisms are in place. Review other security settings.

Transitioning from Audit to Enforcement Mode

Once you are confident that your AppLocker rules effectively manage applications while minimizing disruption, you can switch to enforcement mode. This involves simply changing the "Enforcement" setting in your rules from "Audit only" to "Enforce." However, it is strongly recommended to perform another round of testing in a limited pilot group before fully deploying the enforced policy across your organization.

Summary

AppLocker audit mode is a critical phase in the deployment of any AppLocker policy. It offers a safe testing environment to refine rules, avoid disruptions, and ensure a smooth transition to an enforced policy. By carefully analyzing the logs and troubleshooting potential issues, administrators can create an effective AppLocker policy that significantly enhances their organization's security posture.

FAQs

1. Can I use AppLocker audit mode on a single computer? Yes, AppLocker audit mode can be configured on individual machines for testing purposes before deploying to a domain. 2. How often should I review AppLocker audit logs? Regular review is crucial. The frequency depends on your environment, but daily or weekly checks are generally recommended, especially during the initial stages of implementation. 3. What are the performance implications of AppLocker audit mode? The performance impact is generally minimal, as audit mode only logs events without blocking applications. However, very high log volumes might impact performance in extreme cases. 4. Can I audit specific file types only? Yes, AppLocker allows you to create rules targeting specific file types (e.g., .exe, .dll, .ps1) through its different rule types. 5. What happens if an application isn't covered by any AppLocker rule? If no rule applies, the application will be allowed to run by default (in both audit and enforcement modes unless you've configured a default deny rule). This highlights the importance of comprehensive rule creation.
